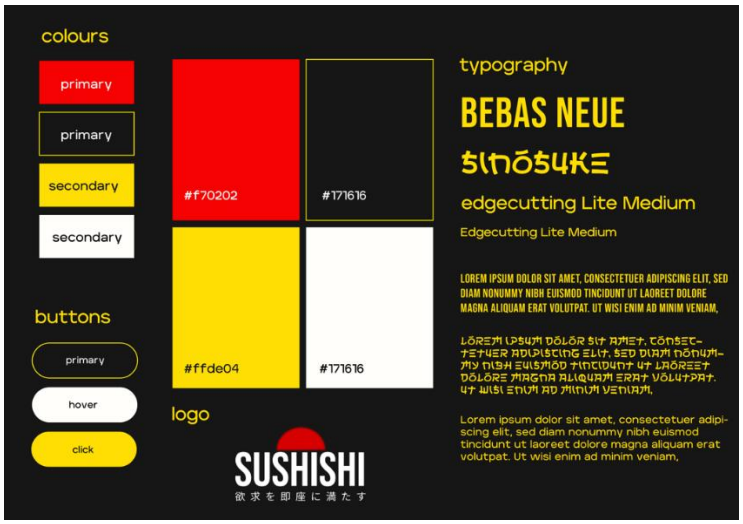
Design

for the design I was highly inspired by other sushi / Japanese restaurants like Zen sushi, Wagamama and Wolt for delivery page.

i wanted to go for a fun colour scheme, i added a bright yellow and it made the website stand out even more.

for fonts I wanted a big font so It will be bold like the colour scheme using “BEBAS NEUE” and a light and clear font for descriptions, “edgecutting lite” gave me that result and the fonts had a contrast balance.



Tested actions

Tested action	Github commit ID	Expected output	Actual output	Pass/Fail	Notes
Goes back to on top homepage	A5221ba	When clicking the sushishi logo it will take you to homepage	When clicking the sushishi logo it will take you to homepage	Pass	
Scrolls itself Down to about us	A5221ba	When clicking the “about” on the header while you’re on homepage it will scroll itself down to about area	When clicking the “about” on the header while you’re on homepage it will scroll itself down to about area	Pass	
Scrolls itself down to contact	A5221ba	When clicking the “contact” on the header while you’re on homepage it will scroll itself	When clicking the “contact” on the header while you’re on homepage it will scroll itself	Pass	

		down to contact area	down to contact area		
Shows its clickable	A5221ba	Shows that “contact me” Is clickable while hovering and while pressing changes colour	Shows that “contact me” Is clickable while hovering and while pressing changes colour	Pass	
Shows the one in front clear from the Infinite display	59ff571	For the carousel the plan was that the images of food options would be clear of which are Infront and rest blurry	The carousel was all clear and food options were next to each other non being blurry	Fail	The actual result was much easier to do and was more suitable for a food menu
Showcases mains	2776831	When clicking from menu option category “mains” it will redirect to the mains page	When clicking from menu option category “mains” it will redirect to the mains page	Pass	
Showcases sides	2776831	When clicking from menu option category “sides” it will redirect to the sides page	When clicking from menu option category “mains” it will redirect to the sides page	Pass	
Showcases kids	2776831	When clicking from menu option category “mains” it will redirect to the mains page	When clicking from menu option category “mains” it will redirect to the mains page	Pass	
Showcases desserts	2776831	When clicking from menu option category “desserts” it will redirect to the desserts page	When clicking from menu option category “desserts” it will redirect to the desserts page	Pass	

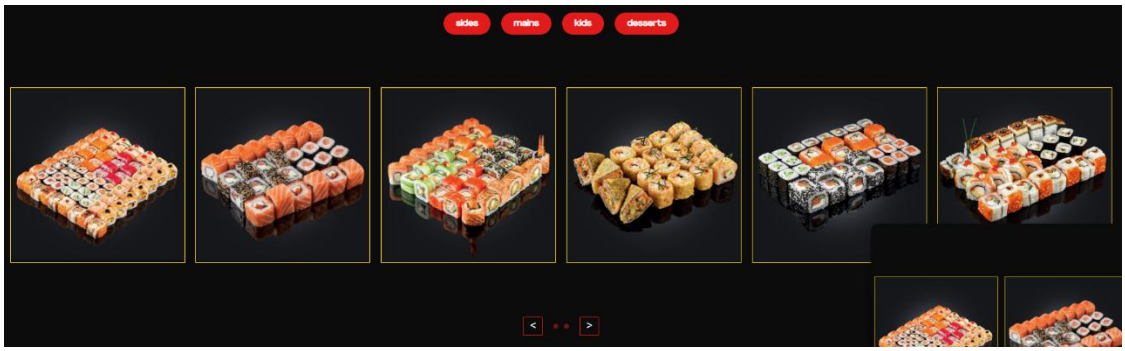
Showcases drinks	2776831	When clicking from menu option category “drinks” it will redirect to the drinks page	Didn’t do a drinks category	Fail	I didn’t do a drinks category because I didn’t find any images of drinks looking like the food with black background
Showcases more food options	59ff571	A carousel animation was added to the code so when you scroll through mains items it will showcase more food options	A carousel animation was added to the code so when you scroll through mains items it will showcase more food options	Pass	
Shows its clickable	11a564F	While hovering on the food options it will show Its clickable	Food options have yellow border	Fail	I didn’t end up doing a hover, but I did a yellow border on food items to be still colourful
Food option in cart	A5221ba	When clicking add to cart for every food option it will redirect it to the cart	Sunshine pack is the only one is the cart	Fail	If I had more time I would have done it to be any item I want to add to cart to go in but I ended up doing sunshine pack only in the cart to be like a prototype
Goes in cart page	A5221ba	When clicking cart icon, it will redirect you to cart page	When clicking cart icon, it will redirect you to cart page	Pass	
Goes to checkout page	A5221ba	When clicking go to checkout, it will redirect you to checkout page	When clicking go to checkout, it will redirect you to checkout page	Pass	
Able to type	A5221ba	When clicking on the “type	When clicking on the “type	Pass	

		bar" of where your location is you will be able to type	bar" of where your location is you will be able to type		
Able to type	A5221ba	When clicking on the "type bar" of payment, you will be able to type	When clicking on the "type bar" of payment, you will be able to type	Pass	
Shows its clickable	A5221ba	Hovering on buy will show its clickable	Hovering on buy will show its clickable	Pass	
Accepted order pop up	Fcbc26a	When clicking on buy a gif will pop up saying "thank you"	When clicking on buy a gif will pop up saying "thank you"	Pass	

Evaluation

overall, the website came out mainly how I wanted it, and expectations came true. If I had some more time I would have balanced out the website better and added more images as some parts may end up too minimalist for my liking in regard to the design. In the home page I had an original idea that the big "S U S H I S H I" logo would have a background on it with a design and sushi next to it, this ended up being the word "S U S H I S H I" only but I played around with colours to make it nicer if I had more time I would have done my original idea. I always love working with food as part of my graphic design and It's great that I had the opportunity to work on this.

the process of doing the whole code wasn't as hard as I expected but It was very time consuming that tested my problem-solving skills. the most challenging code I had was doing the carousel. It took me the most time, and I had to use different methods until I found something that worked I ended up using functions and script.



some codes I haven't done before would be the pop up “thank you” after clicking order. In the html I did this by also using functions and script, and even though I didn’t find a way to make the pop up go with clicking anywhere on the screen it goes hidden after 3 seconds, this ended up working smoothly and was still successful. The extension “Live Server” is the plugin that allowed me to view changes in real time without the need to constantly refresh the browser. This was very useful for my workflow and helped me work more efficiently. While coding this year I added notes while coding and I wasn’t lost when I needed to find what I did which made my workflow also better just like the live server.

```
.sushi-title .red {
  color: #e31b1b;
}

.sushi-title .yellow {
  color: #ffde04;
}

/* in my homepage i made text of the name of my website and made the "i" yellow*/

.sushi-title .underline {
  width: 90%;
  height: 3px;
  background-color: #ffde04;
  margin: 40px auto 0;
}

/* underlines are added to have like a page break and for style*/

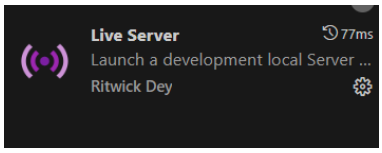
.about-section {
```

```
.cart-container {
  max-width: 800px;
  margin: 0 auto;
}

/* fixed recommended section with doing a grid and sectioning them where they should be */

/* for today do carousal like how boost strap is. add you images colum in the code so it can

.delivery-image {
  height: 70vh;
  overflow: hidden;
}
```



I found bootstrap really helpful It made me understand coding better and It was easy to find what I needed.

The last part in my website journey was that I had to validate my code, after I entered to check all my code I noticed that the only problem I had was with the images and it gave me this error.

1. **Error** **Bad value** `images/suhishi logo.png` **for attribute** `src` **on element** `img`**: Illegal character in path segment: space is not allowed.**
   From line 13, column 9; to line 13, column 54
   `>↩ <img src="images/suhishi logo.png" alt="Home">↩`
2. **Error** **Bad value** `images/shopping cart .png` **for attribute** `src` **on element** `img`**: Illegal character in path segment: space is not allowed.**
   From line 22, column 13; to line 22, column 60
   `<img src="images/shopping cart .png" alt="Cart">↩`
3. **Error** **Bad value** `images/menu page header.png` **for attribute** `src` **on element** `img`**: Illegal character in path segment: space is not allowed.**
   From line 29, column 9; to line 29, column 69
   `>↩ <img src="images/menu page header.png" alt="Menu Hero Image">↩ <`

It was like this for all my images and what I did to solve this problem was by removing the spaces from the names I did this by changing name from the image itself and from the html pages where it had the image linked, the name had to be changed there also so it will connect

with the new name of the image. After this process was made no errors were found and the Sushishi website was done.
