

## **Web Development 5.1A, about website design k.a.p**

For my website I will be doing a Japanese sushi take away website called Sushishi. At the Sushishi website you will be able to see the newest seasonal sushi in the home page, and the menu with all the delicious food.

My purpose for this takeaway website is to satisfy cravings. My target audience would be teens and adults when craving sushi and when they don't have time to cook. It would be a convenient website as you can order from Sushishi website itself. The wireframes it will have is, home page, contact, menu, food choice description and the checkout section. As for colour palettes, I want it to be fun and eye catching so I went out of my comfort zone and wanted to explore a mix of bright colours, with black contrasting it.

The functions I will have in my website is like easy navigation. I hate when websites are really confusing and hard to understand mainly when its somewhere to order food, It should be straight forward, easy and a fun experience with no complications so I will try my best to do that. I will add scroll functions to scroll through food options. Lastly I will add a tracking system like wolt and bolt food so you can see where your food is at and you can rely on my website even more, most customers would prefer tracking as they can be stress free and have an enjoyable experience.
